EDUCATION

B.E. in Computer Science

Indian Institute of Technology Bombay
CGPA: 9.80/10.0 (2021-2025)

SKILLS

Languages

Go, Java, Python, TypeScript, C++, SQL

Frameworks & Systems

Spring Boot, Node.js, FastAPI, React, Next.js, gRPC

Databases & Storage

PostgreSQL, Redis, MongoDB, Apache Kafka, Elasticsearch

Cloud & DevOps

Docker, Kubernetes, AWS (EC2, S3, RDS), Git, CI/CD Pipelines

EXPERIENCE

Software Development Engineer I — InMobi Technologies *Jan 2022 – Present*

- Architected high-throughput payment webhook processor using Go and Redis Streams, handling 14,000 requests/sec with p99 latency under 28ms.
- Engineered distributed idempotency layer with Redis and PostgreSQL, eliminating 100% of double-debit anomalies during peak flash sales.
- Optimized database queries and added composite b-tree indexes on partitioned ledger tables, lowering average query execution time from 420ms to 35ms.

PROJECTS

Peer-to-Peer File Transfer Protocol with NAT Traversal [Rust, STUN/TURN, UDP, Tokio, Cryptography]

- Developed user-space P2P file synchronization tool implementing UDP hole-punching and ICE protocol to bypass restrictive symmetric NATs.
- Utilized ChaCha20-Poly1305 authenticated encryption to guarantee confidentiality and packet integrity over public Wi-Fi networks.
- Achieved wire-speed throughput of 940 Mbps over local gigabit connections using zero-copy memory-mapped file buffers.

High-Concurrency Real-Time Collaboration Canvas [TypeScript, WebSocket, CRDT, React, Node.js]

- Built multi-user collaborative workspace using Conflict-free Replicated Data Types (CRDTs) to ensure convergence across disconnected edits.
- Engineered WebSocket server in Node.js with delta-compression protocol, reducing network bandwidth consumption by 64% during intense cursor movements.
- Authored comprehensive property-based test suite with fast-check verifying eventual consistency across simulated random network partitions.
