EDUCATION

B.Tech in Electronics and Communication Engineering

International Institute of Information Technology
CGPA: 8.40/10.0 (2021-2025)

SKILLS

Languages
Go, Java, Python, TypeScript, C++, SQL

Frameworks & Systems
Spring Boot, Node.js, FastAPI, React, Next.js, gRPC

Databases & Storage
PostgreSQL, Redis, MongoDB, Apache Kafka, Elasticsearch

Cloud & DevOps
Docker, Kubernetes, AWS (EC2, S3, RDS), Git, CI/CD Pipelines

EXPERIENCE

Software Engineer - Core Services — Zomato Limited

Jul 2024 - Present

- Optimized database queries and added composite b-tree indexes on partitioned ledger tables, lowering average query execution time from 420ms to 35ms.
- Engineered distributed idempotency layer with Redis and PostgreSQL, eliminating 100% of double-debit anomalies during peak flash sales.
- Implemented automated circuit-breaker pattern with Resilience4j across 8 downstream microservices, preventing cascade outages during third-party gateway downtime.

PROJECTS

Autonomous Code Review Linter & Security Auditor [Python, AST, Tree-sitter, Docker, FastAPI]

- Engineered static analysis pipeline parsing abstract syntax trees (ASTs) to detect SQL injection, unvalidated deserialization, and memory leaks.
- Built automated GitHub Action integration running checks across 200+ pull requests with an average scan duration under 3.5 seconds.
- Containerized execution sandbox using gVisor and Docker to securely isolate untrusted student code submissions.

High-Concurrency Real-Time Collaboration Canvas [TypeScript, WebSocket, CRDT, React, Node.js]

- Built multi-user collaborative workspace using Conflict-free Replicated Data Types (CRDTs) to ensure convergence across disconnected edits.
- Engineered WebSocket server in Node.js with delta-compression protocol, reducing network bandwidth consumption by 64% during intense cursor movements.
- Authored comprehensive property-based test suite with fast-check verifying eventual consistency across simulated random network partitions.
