PROFESSIONAL SUMMARY

Results-driven software engineer with strong foundation in distributed systems, high-concurrency backend services, and clean architecture. Experienced in designing fault-tolerant microservices, optimizing database throughput, and shipping production code with rigorous test coverage.

EDUCATION

Master of Computer Applications (MCA) — National Institute of Technology Tiruchirappalli *2021 - 2025*

Cumulative Grade Point Average: 8.70/10.0

WORK EXPERIENCE

Platform Engineer — Flipkart Internet Pvt. Ltd., Bengaluru, India *Jun 2024 - Present*

- Developed responsive internal operations dashboard in React and TypeScript with TanStack Query, accelerating merchant dispute resolution by 40%.
- Migrated monolithic checkout service to gRPC microservices, shrinking cloud compute costs by 32% and reducing deployment cycle times from 4 hours to 12 minutes.
- Implemented automated circuit-breaker pattern with Resilience4j across 8 downstream microservices, preventing cascade outages during third-party gateway downtime.

TECHNICAL PROJECTS

High-Concurrency Real-Time Collaboration Canvas | Technologies: TypeScript, WebSocket, CRDT, React, Node.js

> Built multi-user collaborative workspace using Conflict-free Replicated Data Types (CRDTs) to ensure convergence across disconnected edits.

> Engineered WebSocket server in Node.js with delta-compression protocol, reducing network bandwidth consumption by 64% during intense cursor movements.

> Authored comprehensive property-based test suite with fast-check verifying eventual consistency across simulated random network partitions.

Autonomous Code Review Linter & Security Auditor | Technologies: Python, AST, Tree-sitter, Docker, FastAPI

> Engineered static analysis pipeline parsing abstract syntax trees (ASTs) to detect SQL injection, unvalidated deserialization, and memory leaks.

> Built automated GitHub Action integration running checks across 200+ pull requests with an average scan duration under 3.5 seconds.

> Containerized execution sandbox using gVisor and Docker to securely isolate untrusted student code submissions.

TECHNICAL SKILLS

Languages: Go, Java, Python, TypeScript, C++, SQL

Frameworks & Systems: Spring Boot, Node.js, FastAPI, React, Next.js, gRPC

Databases & Storage: PostgreSQL, Redis, MongoDB, Apache Kafka, Elasticsearch

Cloud & DevOps: Docker, Kubernetes, AWS (EC2, S3, RDS), Git, CI/CD Pipelines
