PROFESSIONAL SUMMARY

Results-driven software engineer with strong foundation in distributed systems, high-concurrency backend services, and clean architecture. Experienced in designing fault-tolerant microservices, optimizing database throughput, and shipping production code with rigorous test coverage.

EDUCATION

Master of Technology in Software Systems — Birla Institute of Technology and Science *2020 - 2024*

Cumulative Grade Point Average: 9.70/10.0

WORK EXPERIENCE

Associate Software Engineer — Swiggy (Bundl Technologies), Bengaluru, India *Jun 2023 - Present*

- Designed real-time event pipeline consuming 5M daily telemetry records via Apache Kafka, providing sub-second fraud detection alerts.
- Engineered distributed idempotency layer with Redis and PostgreSQL, eliminating 100% of double-debit anomalies during peak flash sales.
- Migrated monolithic checkout service to gRPC microservices, shrinking cloud compute costs by 32% and reducing deployment cycle times from 4 hours to 12 minutes.

TECHNICAL PROJECTS

Distributed Log-Structured Key-Value Store | Technologies: Go, Raft Consensus, gRPC, LSM-Tree, Docker

- Implemented distributed LSM-tree storage engine in Go with write-ahead logging (WAL), SSTable compaction, and bloom filters.
- Embedded Raft consensus algorithm for distributed multi-node replication, surviving arbitrary node crashes without state divergence.
- Benchmarked performance using custom concurrent load generator, achieving 85,000 read operations/sec across a 5-node cluster.

High-Concurrency Real-Time Collaboration Canvas | Technologies: TypeScript, WebSocket, CRDT, React, Node.js

- Built multi-user collaborative workspace using Conflict-free Replicated Data Types (CRDTs) to ensure convergence across disconnected edits.
- Engineered WebSocket server in Node.js with delta-compression protocol, reducing network bandwidth consumption by 64% during intense cursor movements.
- Authored comprehensive property-based test suite with fast-check verifying eventual consistency across simulated random network partitions.

TECHNICAL SKILLS

Languages: Go, Java, Python, TypeScript, C++, SQL

Frameworks & Systems: Spring Boot, Node.js, FastAPI, React, Next.js, gRPC

Databases & Storage: PostgreSQL, Redis, MongoDB, Apache Kafka, Elasticsearch

Cloud & DevOps: Docker, Kubernetes, AWS (EC2, S3, RDS), Git, CI/CD Pipelines
